## SPECIFICATIONS & AVAILABLE EQUIPMENT

The "Rollspread," TG505 Series, Tailgate Spreader is a driven roll type spreader designed to fasten to the back end of any standard 7 foot 6 inch, or 8 foot wide outside dimension, dump truck body. The unit does an efficient job of spreading sand, salt, cinders, gravel, slag or other material up to 1 inch diameter to a 3 inch depth. The standard spreader width is 8 feet. The depth of spread is controlled by the one lever on the keyboard with hydraulic fine adjustment on the speed of the feed roll. Practically any desired amount of material per square yard can be spread.

When the "Rollspread" is being used for ice control, the spreader can be adjusted to spread as little as 75 pounds of de-icing chemicals per mile to any desired amount. In either season the material in the dump truck can be emptied over top of the spreader without detaching the spreader from the dump body.

Once the depth is set, the "Rollspread" spreader is operated by one lever in the cab of the truck. The hydraulic drive permits spreading while the truck is moving forward or backward.

### PRODUCT FEATURES

- One man operation.
- No costly maintenance.
- Even flow of material over the entire width of the spreader.
- Ease of attaching or detaching the spreader.
- All year use.
- Hopper – All welded steel construction. Full 8 foot wide spread.
- Dimensions – Height 20" – Length 24" – Width 8'-7".
- Truck Width – Fits any 7' 6" or 8' wide outside dimension standard dump truck body.
- Spreads – Salt from 75# per mile to any desired amount or from feather edge to 3" depth.
- Drive – Designed for trucks with central hydraulic systems.
- Sectionalized Riveted Keyboard – Meters the spread, eliminates hand patching.
